DETAILED ACTION

Reasons for Allowance

1. Claims 1-7 are allowed.

2. Examiner's Statement of Reasons for Allowance:

Applicant(s) invention relates to an alternator-starter, and more specifically, to an alternator-starter electrical scheme used in a vehicle.

The reversible polyphase rotary electrical machine called an alternator-starter for a motor vehicle with a heat engine is adapted to work either as an electric generator or as an electric motor for starting the engine. The machine has sensors of the linear type for delivering signals. A summation of the signals delivered by the sensors is performed in a processing unit to create signals, which are out of phase with each other and the number of which is equal to the number of sensors, and for each out of phase signal the sum of the coefficients is zero.

There are inventions in the field that provide similar functionality and/or have similar features, as prior art of record shows. Applicant(s) invention differs from the prior art of record by the control means, which are presented by a scheme with the specific control functions, which are performing as disclosed and claimed, and which examiner's search failed to find.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably

Art Unit: 2834

accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
